

Boxcondens®

Neutralisation with fast assembly and maintenance

The Boxcondens® purifies and neutralises condensate from gas and oil condensing boilers before it is released into the environment. Thanks to the integrated neutralisation basket Boxcondens® is quick to install and easy to maintain. Boxcondens® is available with and without a feed pump.

Your benefits:

- Plug & Play installation

The Boxcondens® can be installed plug & play on all gas and oil condensing boilers from 0 to 1000 kW (gas), or 160 kW (oil). The neutralising agent is already filled in and the condensate pump is ready-mounted on request.

- Pull & Push maintenance

The Boxcondens® is easy to maintain thanks to the integrated baskets: Pull out the basket (pull), wash, refill with neutralising agent and push the basket back in (push). The baskets can also be easily replaced and returned to Powercondens®. There they are reprocessed. A recycling cycle is created.

- Certification

The Boxcondens® is certified according to DVGW VP 114 and is therefore CE certified. Thus, it meets all requirements and corresponds to the state of the art.

Our vision: From condensate to water

Powercondens® ensures the correct treatment of condensate from heating, ventilation and air conditioning units. The specialist develops and produces well-thought-out solutions, is on the cutting edge and thinks ahead. Together with its sales partners, its innovative solutions and high-quality products, Powercondens® protects man and the environment - reliably since 1999.

Our product range:

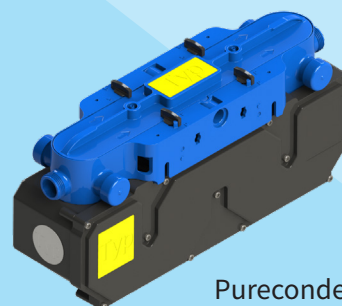

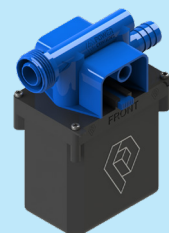

Heatcondens®

Boxcondens®

Wallcondens®

Purecondens®

Aircondens®

Climacondens®
