

Purecondens®

Neutralisation with simplified maintenance

The Purecondens® purifies and neutralises condensate from gas and oil-fired condensing units before it enters the environment. The product is easy to maintain by cartridge change. Purecondens® is available with and without a feed pump.

Your benefits:

- Plug & Play installation

The Purecondens® can be combined plug & play with all gas and oil condensing boilers from 0 to 1200 kW (gas) or 600 kW (oil). On request, Powercondens® can be supplied with the appropriate connection to the corresponding condensing boiler. In this way, the Purecondens® can be connected directly.

- Pull & Push maintenance

The Purecondens® is easy to maintain by changing the cartridge. Remove the used cartridge (pull), fit a new cartridge (push). The used cartridge can be returned to Powercondens® and will be reconditioned. It couldn't be simpler.

- Reliable operation

The Purecondens® has been tested in accordance with DVGW VP 114 and is therefore CE certified. Thus, it meets all requirements and corresponds to the state of the art.

Our vision: From condensate to water

Powercondens® ensures the correct treatment of condensate from heating, ventilation and air conditioning units. The specialist develops and produces well-thought-out solutions, is on the cutting edge and thinks ahead. Together with its sales partners, its innovative solutions and high-quality products, Powercondens® protects man and the environment - reliably since 1999.

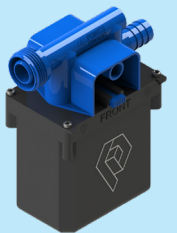

Our product range:

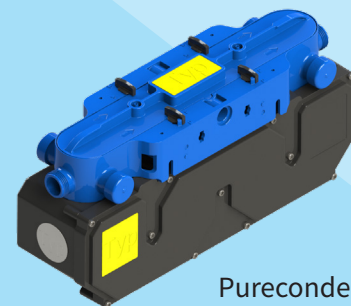

Heatcondens®

Boxcondens®

Wallcondens®

Purecondens®

Aircondens®

Climacondens®
