

# Wallcondens®

The small one for gas wall heaters up to 45

The Wallcondens® cleans and neutralises the condensate from gas wall units up to 45 kW before it is released into the environment. The product fits directly onto the siphon hose, can be mounted anywhere on the wall and maintenance is carried out by simply changing the cartridge.

## Your benefits:

### - Plug & Play installation

The Wallcondens® can be plug & play combined with all gas wall appliances up to 45 kW. The rigid siphon hose (grey or black) fits tightly on the Wallcondens®. Wall-mounting is done with only one hole and the drain hose is included.

### - Maintenance by changing the cartridge

The Wallcondens® can be maintained simply by changing the cartridge. Remove the used cartridge, fit a new one. It couldn't be simpler.

The used cartridge can be returned to Powercondens and will be reprocessed. A recycling cycle is created.

### - Reliable operation

The Wallcondens® is tested according to DVGW VP114 and CE certified.

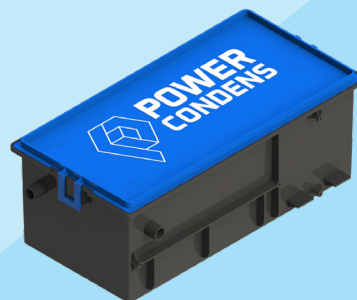

## Our vision: From condensate to water

Powercondens® ensures the correct treatment of condensate from heating, ventilation and air conditioning units. The specialist develops and produces well-thought-out solutions, is on the cutting edge and thinks ahead. Together with its sales partners, its innovative solutions and high-quality products, Powercondens® protects man and the environment - reliably since 1999.
